

SUMMARY

Business Systems Analyst with around 5 years of working experience bridging business requirements and technical solutions across telecom, insurance, and enterprise environments. Experienced in requirements gathering, system analysis, process modeling, SQL, API integration, Agile/Scrum, UAT, and data validation, with a proven ability to optimize workflows, improve system functionality, and deliver data-driven solutions through effective cross-functional stakeholder collaboration.

EXPERIENCE

SVR Telecom US Inc Business Systems Analyst	USA Apr 2025 - Present
- Led requirements gathering and stakeholder workshops for telecom business systems, translating operational needs into functional requirements and user stories while reducing requirement clarification cycles by 22%. - Designed future-state business process models and functional specifications using Visio, Lucidchart, and Miro, improving process visibility and reducing handoff-related rework by 18% across cross-functional teams. - Developed SQL-based data analysis and data validation routines to reconcile business and system data, reducing recurring data discrepancies by 17% and improving confidence in operational reporting. - Streamlined workflow processes through gap analysis, root cause analysis, and continuous improvement initiatives, reducing manual process steps by 16% and improving operational efficiency for business users. - Prepared business reporting and KPI dashboards using Power BI and Advanced Excel, enabling stakeholders to track system performance, process trends, and operational metrics through structured decision-support reporting.	
MetLife System Analyst	USA Aug 2024 - Mar 2025
- Analyzed business and system requirements for enterprise application enhancements, translating stakeholder needs into functional specifications and use cases that reduced requirement-related rework by approximately 15%. - Conducted system analysis, data mapping, and process evaluation across integrated workflows, identifying functional gaps and improving requirement traceability by 18% through structured documentation and stakeholder reviews. - Developed SQL queries for data validation, reconciliation, and system analysis, reducing manual investigation effort by 20% while improving accuracy of business and application data used for decision-making. - Supported REST API analysis and validation using Postman, JSON, and XML, helping identify integration issues earlier and reducing recurring interface defects by approximately 16% during testing cycles. - Coordinated UAT, functional testing, regression testing, and defect management activities, improving test coverage by 18% and supporting smoother releases across business and technology teams.	
LTIMindtree Business Analyst	India Jan 2020 - Jul 2022
- Gathered business and functional requirements through stakeholder discussions and structured analysis, translating operational needs into user stories and acceptance criteria while reducing requirement gaps by approximately 17%. - Modeled existing and future-state processes using Visio and Lucidchart, identifying workflow bottlenecks and supporting process improvements that reduced unnecessary manual activities by 14%. - Prepared BRDs, FRDs/FSDs, use cases, process flow diagrams, and technical documentation, creating consistent requirements references that improved development and testing coordination across project teams. - Supported Agile/Scrum sprint planning and backlog refinement while building Tableau KPI reports, improving delivery prioritization and stakeholder visibility into business performance and operational trends. - Evaluated system integration requirements and performed API analysis using Postman, JSON, and XML, supporting interface validation and reducing integration-related troubleshooting effort by approximately 18%.	

SKILLS

Business Analysis: Requirements Gathering, Business Requirements, Functional Requirements, Gap Analysis, Process Analysis, Stakeholder Management	Visualization & Reporting: Advanced Excel, Power BI, Tableau, KPI Reporting, Dashboard Development, Business Reporting
Systems Analysis: System Analysis, Functional Specifications, Solution Design, System Integration, Business Process Modeling	API & Integration: REST APIs, API Analysis, JSON, XML, Postman, System Integration
Agile & SDLC: Agile, Scrum, Waterfall, SDLC, Sprint Planning, Backlog Management, User Stories	Testing & QA: UAT, Test Case Design, Functional Testing, Regression Testing, Defect Management, Test Validation
Documentation: BRD, FRD/FSD, Use Cases, User Stories, Process Flows, Acceptance Criteria, Technical Documentation	Process Improvement: Process Optimization, Root Cause Analysis, Gap Analysis, Workflow Improvement, Continuous Improvement
Data & SQL: SQL, Data Analysis, Data Validation, Data Mapping, Data Reconciliation, Database Analysis	Tools: Jira, Confluence, Azure DevOps, Lucidchart, Balsamiq, Miro
	Professional Skills: Analytical Thinking, Problem Solving, Communication, Decision-Making, Leadership, Time Management

EDUCATION

Master of Science in Information Systems Cleveland State University	May 2024 Cleveland, OH
